

WHAT IS CLAIMED IS:

1. An information management system comprising:  
a first database storing first information for viewing and manipulation by one or more system users, said first information being manipulated and/or viewed by system users but not being used directly to define system operation or function;

a user profile database wherein said database has stored therein identification information which correlates at least one of said system users with a user specific data manipulation logic and/or data display format that at least in part defines system operation;

a rules database storing information defining system response to user modifications to said first information; wherein at least one system response to a first user modifying said first information comprises altering the user profile of at least a second user.

2. The system of Claim 1, wherein said databases and associated application programming are web hosted, and wherein said plurality of system users interface with said databases and said associated application programming using a web browser program.

3. A computer readable medium having stored thereon instructions which cause a general purpose computer to perform the steps of:

open client accounts;  
record client information;  
execute business transactions; and  
updating at least one user profile in response to one or more of the above steps.

4. In a transaction based system, a method of managing transactions comprising the steps of:

open client accounts;  
record client information;  
execute business transactions; and  
updating at least one user profile in response to one or more of the above steps.

5. In a computerized information management system, a method of managing financial portfolios comprising:

ing information in a database;  
 ning a user profile to each of a set of users, wherein said  
 nformation in said database which is available to a user, and  
 n in said database that the user may perform;  
 ing a set of rules governing how a first user action such  
 in said database is to affect user profiles of users other than said  
 natically updating in accordance with said rules informat  
 erein said updating is in response to said first user's activity; and  
 natically updating in accordance with said automatic update of  
 of said first user and said user profiles other than said  
 onse to said first user's activity.

ing information in a database;  
 ning a user profile to each of a set of users, wherein said  
 nformation in said database which is available to a user, and  
 n in said database that the user may perform;  
 ing a set of rules governing how a first user action such  
 in said database is to affect user profiles of users other than said  
 natically updating in accordance with said rules informat  
 erein said updating is in response to said first user's activity; and  
 natically updating in accordance with said automatic update of  
 of said first user and said user profiles other than said  
 onse to said first user's activity.

ing information in a database;  
 ning a user profile to each of a set of users, wherein said  
 nformation in said database which is available to a user, and  
 n in said database that the user may perform;  
 ing a set of rules governing how a first user action such  
 in said database is to affect user profiles of users other than said  
 natically updating in accordance with said rules informat  
 erein said updating is in response to said first user's activity; and  
 natically updating in accordance with said automatic update of  
 of said first user and said user profiles other than said  
 onse to said first user's activity.

ing information in a database;  
 ning a user profile to each of a set of users, wherein said  
 nformation in said database which is available to a user, and  
 n in said database that the user may perform;  
 ing a set of rules governing how a first user action such  
 in said database is to affect user profiles of users other than said  
 natically updating in accordance with said rules informat  
 erein said updating is in response to said first user's activity; and  
 natically updating in accordance with said automatic update of  
 of said first user and said user profiles other than said  
 onse to said first user's activity.

ing information in a database;  
 ning a user profile to each of a set of users, wherein said  
 nformation in said database which is available to a user, and  
 n in said database that the user may perform;  
 ing a set of rules governing how a first user action such  
 in said database is to affect user profiles of users other than said  
 natically updating in accordance with said rules informat  
 herein said updating is in response to said first user's activity; and  
 natically updating in accordance with said automatic update of  
 of said first user and said user profiles other than said  
 n response to said first user's activity.
